

MOSAIC

Multi-customer Orchestration System for Adaptive Intake and Continuous Delivery

From business need to governed solution dossier—in minutes, not days.

Business user → GitHub Copilot App → governed analysis → 23-file dossier → human decisions.

Before

Repeated discovery, copied notes and inconsistent handoffs.

With MOSAIC

Adaptive intake, approved evidence and one review package.

Business value

Less preparation and rework; experts focus on decisions.

Scale the expertise. Keep the accountability.

One governed flow, proven in the App.

Synthetic example: trusted travel-policy guidance for 250 field employees.

AUTHENTIC APP INTAKE

GitHub Copilot App: plain-language request -> adaptive intake.

1 INTAKE

**Need, scope
+ risks**

2 GOVERN

**Approved evidence
+ bounded plan**

AUTHENTIC GENERATED OUTPUT

Generated dossier: unselected discussion draft -> awaiting human review.

3 PREPARE

**Three options
+ 23 files**

4 REVIEW

**Select architecture;
approve revision later**

Authentic 2:55 recording. Architecture selection and design approval remain separate.

Adoption motion and expected value.

Illustrative planning model—not measured savings or a customer forecast.

96 hours

Manual preparation

16 hours

Retained human review

80 hours

Potential effort saved: 83%

At \$200/hour: \$16,000 gross capacity per request.

\$1.6M at 100 requests/year, before additional effort and operating costs.

Adoption: synthetic proof -> customer benchmark -> isolated rollout -> scale.

Customer-specific evidence, templates, roles and approval rules.

Scale the expertise. Keep the accountability.
