GitHub Copilot App

Turn expertise into repeatable work.

Direct agent work. Review the outcome.
MOSAIC shows the pattern beyond code.

Connect context. Coordinate expertise. Keep people in control.

Sources: S01, M02 | Synthetic reference; customer decisions remain with people.

Give teams their context back.

Before: reconstruct the work

Search scattered guidance.
Repeat discovery and handoffs.
Rebuild assumptions for review.

With the App + MOSAIC

Start from one business need.
Apply reusable, approved expertise.
Carry context into a reviewable draft.

REQUESTER > SOLUTION ENGINEER > QUALIFIED REVIEWERS

Chats, attachments, issue context and optional voice input can meet people where work starts.

The business target: less repeated preparation, clearer decisions and less rework.

Sources: S01, S03, M02, M06 | Synthetic reference; customer decisions remain with people.

Why the App? Direct work, not just code.

IDE

Hands-on coding

Edit, debug and refine software directly.

GITHUB COPILOT APP

Agent-directed work

Direct sessions, inspect results and review work with GitHub.

STANDALONE APPLICATION

Your own experience

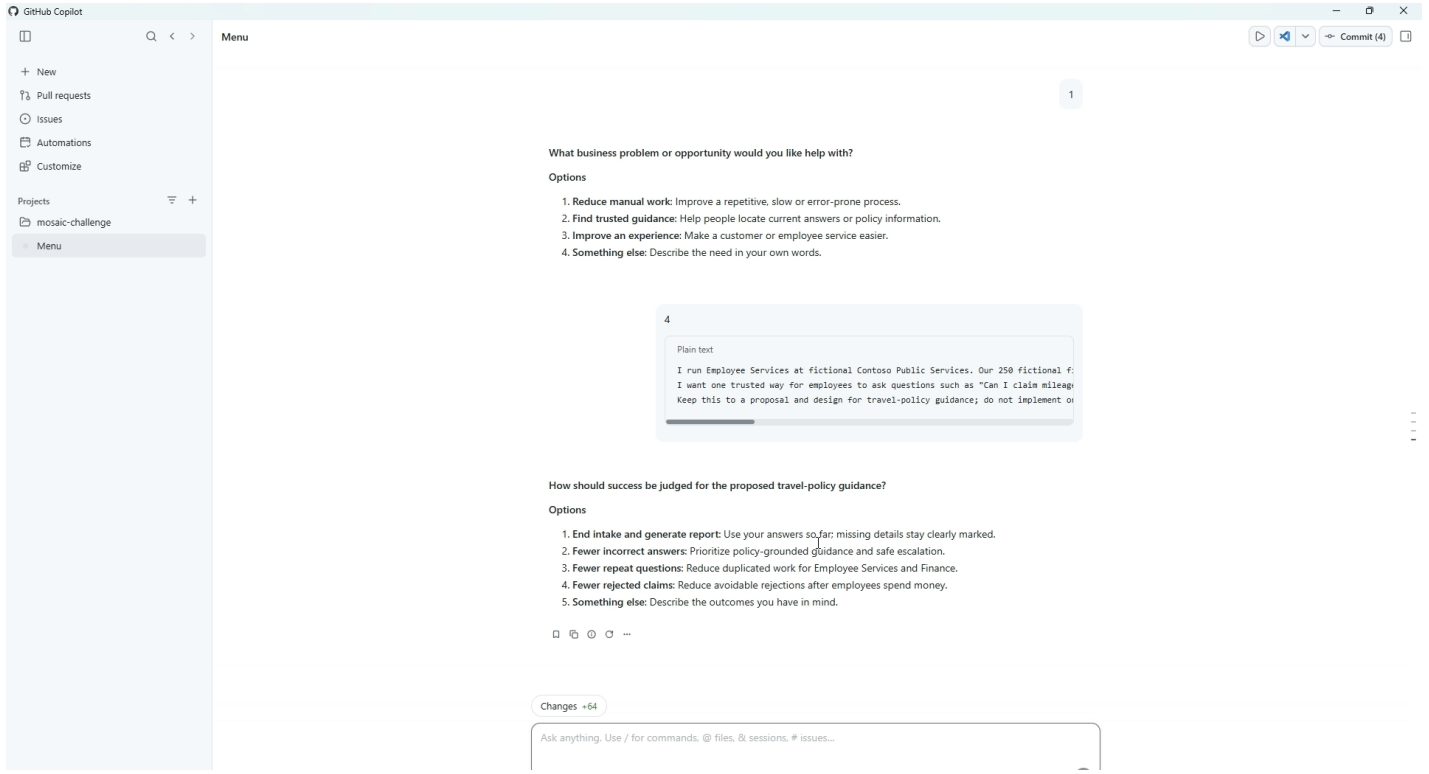

Own the product interface, integration and operations.

Selection lenses, not exclusive capabilities. IDEs and other agent tools also support agents, MCP and Git.

Choose the complete working experience. Keep the IDE where it adds value.

Sources: S01, S02, S03, S12, S15, M02 | Synthetic reference; customer decisions remain with people.

Watch the App do the coordinating.

AUTHENTIC APP USE

1 **Describe the need**

2 **Approve bounded preparation**

3 **Open the dossier**

Play the 2:55 recording

App = conversation + tools. MOSAIC = domain process + validation. People = decisions.

Sources: M01, M02, M03, M07 | Synthetic reference; customer decisions remain with people.

Connect business context with WorkIQ + MCP.

WorkIQ

M365 questions + entities

WorkIQ preview

Retrieve-first grounding

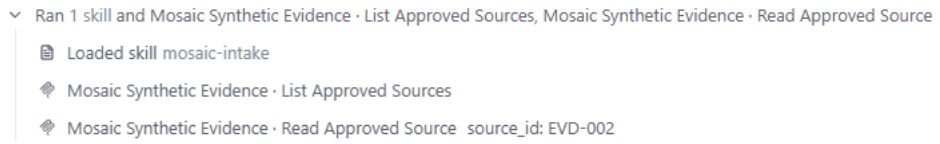

Productivity

10 read-only insight skills

M365 Agents Toolkit

Later build / evaluation

Already demonstrated in the App

Separate rehearsal: 2 tools / 4 synthetic sources.

EXTEND TO APPROVED CONTEXT

Microsoft 365, Azure DevOps and customer-specific MCP adapters.

WorkIQ: preview; tenant consent required.
Proposed authorized reads only; WorkIQ can write.

Connect approved context to the workflow; do not make the requester reconstruct it.

Sources: S02, S08, S09, S14, S20, M07 | Synthetic reference; customer decisions remain with people.

Package your best way of working.

Instructions

Set the standards that travel with a repository or team.

Skills

Make a good procedure reusable, discoverable and repeatable.

Plugins

Bundle expertise and integrations for approved distribution.

DISCOVER

Marketplaces + Agent Finder

EXTEND

Agents + hooks + MCP + LSP + canvases

Demonstrated skills today. An approved MOSAIC plugin could simplify reuse.

Sources: S02, S05, S06, S17, M02, M07 | Synthetic reference; customer decisions remain with people.

Add specialists. Keep one conversation.

FIVE CONFIGURED MOSAIC PROFILES

MOSAIC Orchestrator

One conversation.
Clear accountability.

Intake Analyst

Need + constraints

Evidence Curator

Approved sources

Solution Architect

Three alternatives

Engagement Planner

Human handoff

Agent picker / child sessions / fleets / orchestration / fork + merge / worktrees

Extension opportunity, not recorded fleet execution. Parallel worktrees are not customer isolation.

Sources: S03, S04, S05, S18, M04 | Synthetic reference; customer decisions remain with people.

Bring expertise. Reuse the agent engine.

GITHUB COPILOT APP

Sessions / Models / GitHub / Canvases

SHARED COPILOT CLI RUNTIME

Plan > use approved tools > inspect > iterate

MOSAIC PROCESS + VALIDATION WORKER

Eight stages / evidence rules / three options / human handoff

EXTEND THROUGH

Skills + agents + MCP
Plugins + hooks + LSP
Canvases
Models / Auto / effort
BYOK + model critique

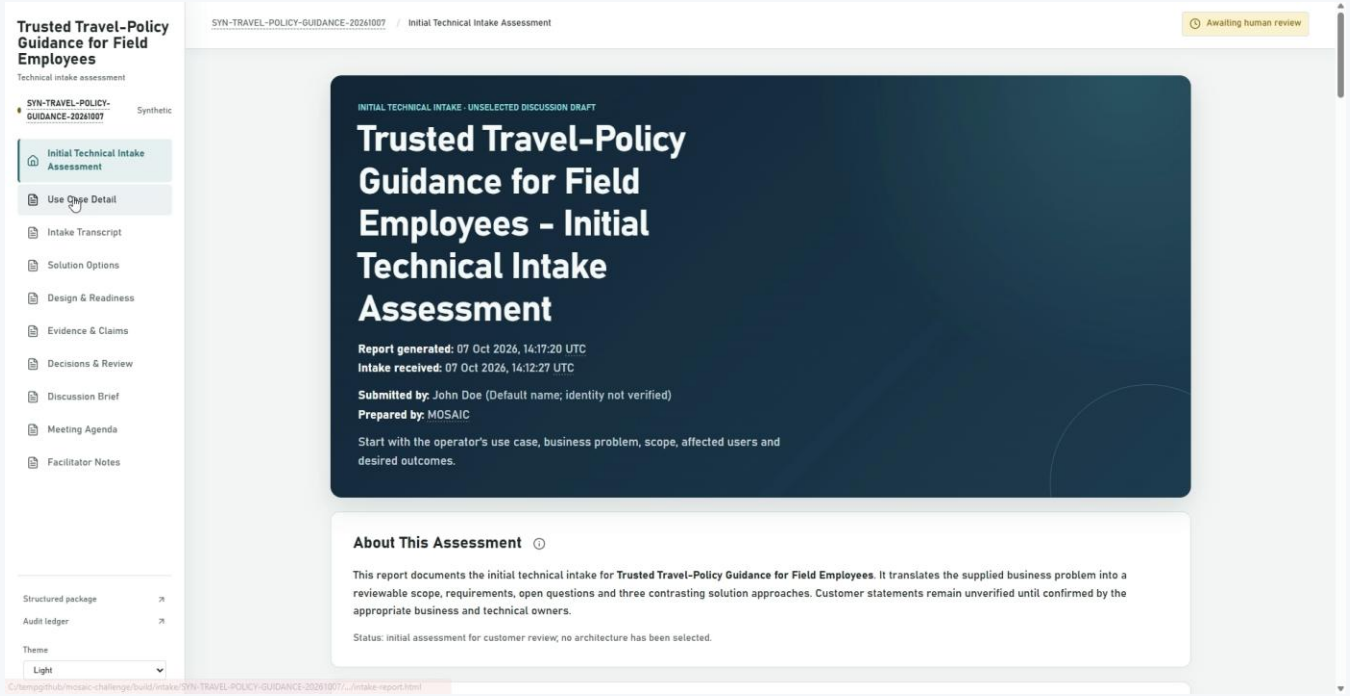

App models do not configure the separate worker. SDK embedding is a future path, not an implemented service.

Reuse the engine and workspace. Keep domain rules, validation and decisions explicit.

Sources: S01, S02, S03, S04, S06, S10, S15, M02 | Synthetic reference; customer decisions remain with people.

Make the work visible, not just conversational.

TODAY: BROWSER DOSSIER

NEXT: APP EXTENSIONS

A shared options board.
An evidence review queue.
An interactive intake canvas.

Canvas + browser tools
Opt-in computer use

23 artifacts: 10 HTML + 9 Markdown + 4 JSON. A native MOSAIC canvas is proposed, not shown.

Sources: S07, S11, S19, M01, M03 | Synthetic reference; customer decisions remain with people.

GitHub is part of the work, not an export.

Find work

My work
Issues + inbox

Direct work

Issue context
Repository templates

Inspect work

Diffs + comments
CI checks + fixes

Reconcile work

Stacked PRs
Controlled merge

Documented App capability; MOSAIC hosted issue / PR / CI scenes are not claimed.

Evaluate the handoffs from request to review, not just the quality of one answer.

Turn a good run into a repeatable practice.

Repeat

Scheduled or on-demand automations can propose fresh work.

Remember

Chronicle, session history and context tools help teams pick up the thread.

Improve

Usage insights, session management and remote access support a working habit.

MOSAIC extension: approved source change > proposed refreshed dossier > qualified review

History is context, not evidence. A schedule cannot approve a customer decision.

Sources: S01, S03, S04, M02 | Synthetic reference; customer decisions remain with people.

More autonomy. Clear human authority.

APP CONTROLS

Session modes
Tool permissions
Local / cloud sandboxes
Managed settings
Content exclusion

TWO CUSTOMER DECISIONS

1 Select the architecture

Before a selected full dossier.

2 Approve the exact dossier revision

In the customer workflow, with authorized people.

Neither decision is recorded by this reference. Security review is assistance, not certification.

MOSAIC stops at awaiting_human_review. No implementation, deployment or release authority.

Sources: S01, S03, S04, S11, S13, M02, M03 | Synthetic reference; customer decisions remain with people.

Put a value hypothesis behind the demo.

ILLUSTRATIVE PLANNING CASE - NOT MEASURED

96h

Manual preparation

16h

Retained human review

80h

Potential capacity

About 83% potential effort reduction.
$16,000 gross capacity at an assumed $200/hour.

Extra retained effort is zero in this base case. Subtract added effort and all incremental costs; capacity is not cash savings.

Measure effort, elapsed time, corrections, reviewer quality and total incremental cost.

Sources: S01, S04, M05 | Synthetic reference; customer decisions remain with people.

Prove the fit on your own workflow.

1 Same task

Same approved task, evidence and acceptance criteria.

2 Compare

Copilot App versus your current IDE or execution tool.

3 Measure

Effort, handoffs, cycle time, quality, corrections and cost.

4 Decide

Add approved extensions; scale only where the fit is proven.

Record versions, models and configurations. No head-to-head result is claimed by this demo.

A feature list is not a benchmark. Prove the workflow advantage with customer evidence.

Sources: S01, S02, S03, S08, M06 | Synthetic reference; customer decisions remain with people.

Bring your next workflow to GitHub Copilot App.

Explore the App

Product capabilities

Replay MOSAIC

Authentic 2:55 workflow

Compare the fit

Measure fit before scaling

Agent engine + extensible workspace + GitHub-connected review.
Your expertise becomes the workflow. People retain the decision rights.

Connect more of the work. Reuse more of the expertise. Keep people accountable.

Sources: S01, S16, M02, M06 | Synthetic reference; customer decisions remain with people.

Feature reference 1/10: Intake and direction

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F01 Chats before a workspace	Scope a need before opening an implementation workstream.	Extension S01, S03 / main 2
F02 Interactive sessions	Ask relevant business questions in the App; keep the requester involved.	App proof S03, M01 / main 4
F03 Plan mode	Declare sources, tools, output and stop conditions before generation.	Configured S03, M02 / main 12
F04 Autopilot mode	Run an approved, bounded preparation task; never bypass customer decisions.	Extension S03, M02 / main 12
F05 File and folder attachments	Bring approved briefs into context; @ files and # issues reduce re-entry.	Extension S03, S04 / main 2
F06 Voice dictation	Speak an intake prompt, then review the locally transcribed text before sending.	Extension S03 / main 2

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S01, S03, M01, M02, S04 | Documented surface snapshot: 19 Oct 2026

Feature reference 2/10: Workspaces and reach

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F07 Parallel sessions and worktrees	Prepare independent workstreams on separate branches, then reconcile changes.	Extension S01, S03 / main 7
F08 Local folders and Git URLs	Reuse the workflow in an approved local repo, including non-GitHub Git hosts.	Extension S03 / main 14
F09 Cloud sandboxes + setup skill	Move suitable work off the laptop; configure the cloud environment explicitly.	Extension S03, S05 / main 14
F10 Local sandbox controls	Limit tool access to files, networks and credentials where supported.	Extension S03, S04 / main 12
F11 Remote session control	Steer an authorized session from GitHub.com or GitHub Mobile, subject to policy.	Extension S04 / main 11
F12 Deep links into the App	Launch a scoped intake from an internal portal or ticket; never put secrets in URLs.	Extension S16 / main 15

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Feature reference 3/10: Models and the shared runtime

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F13 Copilot CLI agent harness	Reuse planning and tool execution; MOSAIC supplies domain rules and validation.	App + worker S01, S15, M02 / main 8
F14 Model selection	Choose a permitted model for the task instead of tying the workflow to one model.	Extension S03, S04 / main 8
F15 Auto model selection	Let the App select a model for task complexity; evaluate quality and consumption.	Extension S03 / main 8
F16 Reasoning effort	Allocate more reasoning to difficult tradeoffs, less to straightforward preparation.	Extension S03 / main 8
F17 Bring your own key (BYOK)	Evaluate approved hosted or local providers; this is a preview App capability.	Extension S10 / main 8
F18 Copilot SDK integration	Embed the same CLI engine in a future service; separate from this App experience.	SDK path S15, M02 / main 8

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S01, S15, M02, S03, S04, S10 | Documented surface snapshot: 19 Oct 2026

Feature reference 4/10: Connected business context

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F19 Local / remote MCP and toolsets	Connect approved tools. App proof: two read-only tools, four synthetic sources.	App proof S02, S14, M07 / main 5
F20 WorkIQ	Propose permissioned M365 evidence retrieval; its full tool surface also has writes.	Extension S08, S09 / main 5
F21 WorkIQ preview	Evaluate retrieve-first grounding and exact operations; tenant-gated, not automatic.	Extension S08, S09 / main 5
F22 WorkIQ productivity	Use the ten read-only insight skills for approved project and engagement context.	Extension S08 / main 5
F23 Azure DevOps MCP	Bring approved work items, repo, wiki, pipeline and test context into preparation.	Extension S20, S14 / main 5
F24 Browser tools via Playwright MCP	Inspect and exercise approved report UIs; an optional integration, not App footage.	Extension S19, M02 / main 9

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S02, S14, M07, S08, S09, S20, S19, M02 | Documented surface snapshot: 19 Oct 2026

Feature reference 5/10: Reusable expertise

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F25 Global App instructions	Set organization-approved expectations for every session, not just one prompt.	Extension S02 / main 6
F26 Repository instructions + /init	Version MOSAIC workflow, evidence boundaries and human-review requirements.	Configured S02, S04, M02 / main 6
F27 Project and personal skills	Package repeatable intake/review procedures; manage and reload skills as needed.	App proof S17, S04, M07 / main 6
F28 Custom agents and tool scopes	Select the Orchestrator and reuse four specialist profiles; constrain their tools.	Configured S18, M04 / main 7
F29 Plugins and marketplaces	Distribute approved skills, agents, hooks, MCP and canvases as a reusable package.	Extension S02, S06 / main 6
F30 Agent Finder + MCP Registry	Discover relevant tools, agents, skills and servers; inspect before installing.	Extension S05, S14 / main 6

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S02, S04, M02, S17, M07, S18, M04, S06, S05, S14 | Documented surface snapshot: 19 Oct 2026

Feature reference 6/10: Extension interfaces

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F31 Plugin hooks	Add supported lifecycle checks or audit integrations; validate enforcement behavior.	Extension S02, S06 / main 6
F32 Plugin LSP configurations	Supply language-aware context for future code work; client support must be verified.	Extension S06 / main 6
F33 Canvases and canvas extensions	Build a shared intake, options or evidence board with human and agent actions.	Extension S07, S05 / main 9
F34 Computer use	Reach GUI-only applications on Windows/macOS; opt-in preview, disabled by default.	Extension S11 / main 9
F35 M365 Agents Toolkit plugin	Support a later M365 agent build/evaluation handoff under separate implementation authority.	Extension S08 / main 5
F36 Customer-specific MCP adapters	Extend to approved knowledge or business systems; no prebuilt adapter is assumed.	Extension S14, M02 / main 5

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S02, S06, S07, S05, S11, S08, S14, M02 | Documented surface snapshot: 19 Oct 2026

Feature reference 7/10: Delegation and challenge

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F37 Cross-session orchestration	Coordinate child sessions and repositories for a larger, explicitly scoped engagement.	Extension S04, S05 / main 7
F38 Parallel agent fleets	Split an independent task into parallel specialist work, then reconcile the result.	Extension S04, M04 / main 7
F39 Focused child sessions	Delegate a bounded evidence or architecture question without losing the parent task.	Extension S04 / main 7
F40 Session fork and merge	Explore a branch of the work and deliberately bring accepted changes back.	Extension S04 / main 7
F41 Cited research	Investigate approved sources and retain citations; findings still need qualified review.	Extension S04 / main 8
F42 Rubber duck and sparring	Use a different-model critique and adversarial reasoning; neither grants approval.	Extension S03, S04 / main 8

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S04, S05, M04, S03 | Documented surface snapshot: 19 Oct 2026

Feature reference 8/10: GitHub-native accountability

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F43 My work, filters and inbox	Find requests and review obligations in one App workspace.	Extension S12, S04 / main 10
F44 Issue context and templates	Start an intake from an issue, or create a scoped follow-up using repo conventions.	Extension S12 / main 10
F45 PRs, diffs and review comments	Open a reviewable change, inspect it, and address feedback using the repo template.	Extension S12, S04 / main 10
F46 CI checks and targeted fixes	See check results and ask for fixes; local tests are not evidence of hosted CI.	Extension S12, S04, M02 / main 10
F47 Stacked pull requests	Separate dependent changes into reviewable layers with child sessions.	Extension S05 / main 10
F48 Agent merge and PR merge	App can resolve blockers and merge. MOSAIC does not treat a merge as customer approval.	Restricted S12, S05, S04 / main 10

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S12, S04, M02, S05 | Documented surface snapshot: 19 Oct 2026

Feature reference 9/10: Continuity and efficiency

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F49 Scheduled / on-demand automations	Propose recurring evidence-refresh drafts; no automatic customer approval or release.	Extension S01, M02 / main 11
F50 Chronicle history and insights	Search, summarize, reindex and improve sessions; history is not approved evidence.	Extension S03, S04 / main 11
F51 Context usage and compaction	Inspect context pressure and summarize long sessions; retain the authoritative dossier.	Extension S04 / main 11
F52 Session and chat management	Rename, restart, clear, archive, restore, search and manage storage deliberately.	Extension S03, S04 / main 11
F53 Usage and rate-limit visibility	Monitor the App allowance and usage; distinguish it from MOSAIC worker cost records.	Extension S01, S04, M02 / main 13
F54 Terminal and local tool execution	Run approved preparation and validation workers from the App-directed workflow.	App + worker S04, M02 / main 8

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S01, M02, S03, S04 | Documented surface snapshot: 19 Oct 2026

Feature reference 10/10: Control and administration

APP / HARNESS CAPABILITY	HOW IT COULD EXTEND MOSAIC	MOSAIC STATE / SOURCES
F55 Tool permissions and auto-approval	Inspect or reset approvals. Broad auto-approval must not override MOSAIC boundaries.	Restricted S04, M02 / main 12
F56 Enterprise-managed settings	Govern supported model, plugin, tool and sandbox settings; check client coverage.	Extension S02, S13 / main 12
F57 Content exclusion	The App respects configured exclusions; confirm scope and other policy limitations.	Extension S01 / main 12
F58 Security-focused review	Use the preview review command for code changes; not a certification or security sign-off.	Extension S03, S04 / main 12
F59 Debug logs and transcript export	Debug locally under policy. Never export raw customer context to a gist by default.	Restricted S04, M02 / main 11
F60 Access, navigation and discovery	App on Windows/macOS/Linux; GitHub sign-in, App policy, keyboard shortcuts and / picker.	Documented S01, S03, S04 / main 14

App proof = recorded. Configured = present. Extension = proposed. Commands are in notes.

Sources: S04, M02, S02, S13, S01, S03 | Documented surface snapshot: 19 Oct 2026

Competitive conversation: fit, not feature myths.

ALTERNATIVE	WHEN IT CAN FIT	WHAT TO EVALUATE
IDE	Keep hands-on editing and debugging.	Compare workflow supervision + review handoffs.
Terminal / CLI runner	Keep scriptable execution and automation.	Compare session visibility + GitHub review.
Other agent apps	Include Claude Code in a same-task trial.	Compare the end-to-end experience, not model rank.
Custom application	Build a dedicated customer interface when needed.	Compare integration, maintenance and user needs.

PROVEN HERE: App intake + skill / synthetic MCP + browser handoff.
NEXT TO PROVE: native fleets, WorkIQ, canvas and hosted PR / CI workflow.

No head-to-head result is claimed. Use comparable tasks and retain the evidence.

Sources: S01, S02, S03, S12, S15, M02, M05 | Documented surface snapshot: 19 Oct 2026

Presenter runbook: a repeatable 15 minutes

00:00-02:15	Business need + why the App versus alternatives
02:15-05:35	Authentic 2:55.57 demo + introduction
05:35-10:40	Context, expertise, agents, shared engine, surfaces, GitHub
10:40-13:20	Repeatability, human control and value hypothesis
13:20-15:00	Adoption path + customer next step

Preflight: video + audio, Presenter View, source freshness, approved media and screenshot fallback.
No connected tenant is needed. Do not improvise a live deployment or a customer approval.

Discussion draft for owner/product-team review. Customer release is not approved.
